

IMEX LX22G CROSS LINE LASER

The green beast is back and better than ever! Imex has offered its new LX22G green beam cross line and plumb spot self-levelling laser to the table and it really hits the mark.

Setting up was super easy with the clamp mount, which has strong magnets for steel beams or attached with the tripod threading or single screw. Once the clamp is firmly attached the Imex will still swivel left and right with ease, which was great for wider applications close up.

The Imex features a locking pendulum that not only protects the pendulum in transport but it also allows you to lock the laser's line for out-of-level lines if you need it.

Turning the Imex on, you will get a super bright green beam and you can easily scroll through the required beams/plumb dots or have all of them on at once. I would have to say this is one of the brightest laser lines I have ever tested and it was sharp and very easy to see. I tested outside on formwork walls and then inside on blockwork walls. Inside and out – it

was great! There is also a pulsating laser mode for use with an optional outdoor detector if needed.

The LX22G is IP55 so it's great for dust and when you get caught out with unforeseen rain.

You can purchase the laser by itself, in the Tripod Kit or with optional extras such as the detector or glasses and target plates.

I highly recommended the Imex LX22G to sparkies, tilers, cabinet makers, interior decorators and many more trades. Awesome bit of equipment!

ARTICLE CRITERIA	BUILDING HAND TOOLS Operator Comments Report	STAR RATING (Out of five)
